GF40/GF80

Thermal Mass Flow

Elastomer and Metal Seal Digital Mass Flow Controllers and Meters

Overview

Brooks GF40 (elastomer seal) and GF80 (metal seal) thermal mass flow controllers (MFCs) and thermal mass flow meters (MFMs) achieve unprecedented performance, reliability, and flexibility in many gas flow measurement and control applications.

At the heart of the GF40/GF80 is Brooks' patented 4th generation MultiFlo™ capable device. MultiFlo overcomes a long-standing limitation of many thermal MFCs — when changing gas types, a simple correction factor, such as the ratio of heat capacities between the calibration gas and new gas, cannot account for accuracy-robbing viscosity and density differences. The Brooks MultiFlo database is built on thousands of native gas runs to establish correction functions that account for both thermal and physical differences among gases making the GF40/GF80 Series among the most accurate and flexible MFCs/MFMs available today.

The Brooks GF40/GF80 Series is the perfect choice for customers who use thermal mass flow controllers or thermal mass flow meters on a variety of gases, who need to change gas type frequently, or who need to re-range while preserving gas measurement and control accuracy. Some examples:

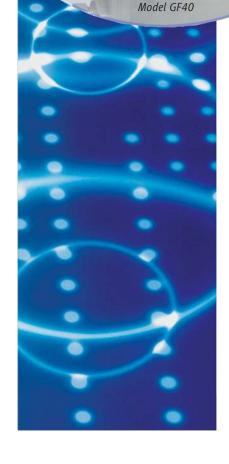

- OEMs will reduce the number of gas and range-specific MFCs that they inventory
- Solar, biotech, CVD, plasma, glass, web coating, nanotechnology, vacuum processing and similar large users of mass flow meters and mass flow controllers will greatly reduce their gas- and range-specific spares inventory
- R&D, research, and laboratory users can quickly change experiment conditions and achieve much better actual process gas accuracy vs. traditional mass flow devices

MultiFlo programming is simple and fast – a new gas and range can be programmed under 60 seconds plus the device can be programmed without removing it from service or disconnecting the device from any process or tool control system.

Product Description

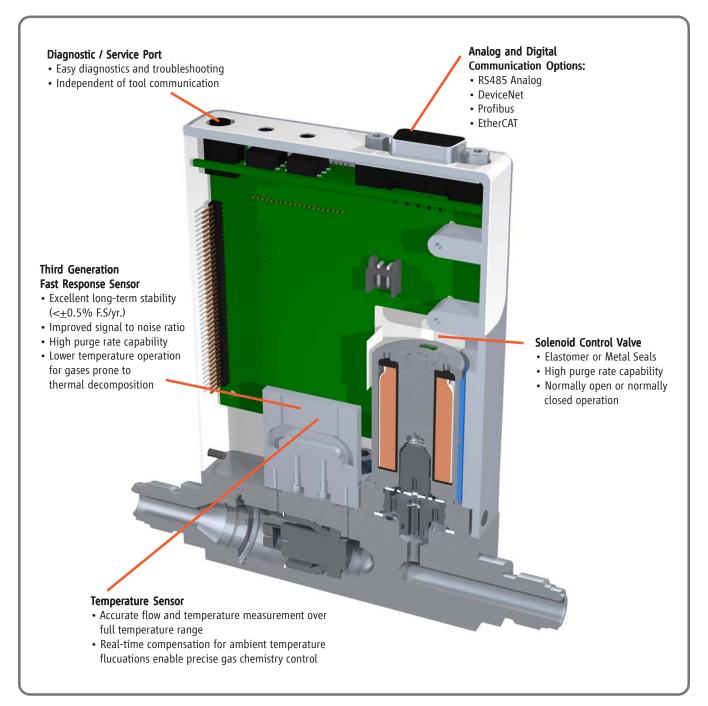

The Brooks GF40/GF80 Series features a corrosion-resistant Hastelloy C-22 sensor for durable, long-term operation. Sub-1 second settling times and 1% of set point accuracy ensure that the GF40/GF80 will provide reliable flow measurement or flow control in demanding gas flow applications. Both GF40 and GF80 achieve excellent internal to external leak integrity for challenging process gases as found in CVD, solar, and other processes. With a wide range of connector types, seal and seat materials, and digital and analog I/O options available, the GF40/GF80 represents an extremely powerful, yet easy, upgrade for existing MFCs or MFMs.

BROOKS

Features and Benefits

Features	Benefits
Elastomer or Metal seal	Cost performance flexibility for a wide range of applications.
MultiFlo Gas and Range Programmabilty with Advanced Diagnostics and User Accessible Service Port	Select new gas calibrations and full-scale ranges without the trouble and cost of removing the mass flow controller from the gas line. Convenient interface to diagnostics port for maximum uptime.
Corrosion Resistant Hastelloy Sensor	Provides unmatched long-term sensor stability ensuring maximum yield and throughput.

Product Description

MultiFlo™ Gas and Range Configurability

A major advancement over traditional single point gas conversion factors, Brooks MultiFlo technology delivers up to a three-times improvement in process gas accuracy. This is achieved through advanced gas modeling plus extensive actual gas testing protocols that provide extremely accurate compensation. MultiFlo also allows the device to be quickly and easily configured for another gas and/or flow range without sacrificing accuracy or range-ability. Selecting a new gas automatically creates a new calibration curve, establishes optimized PID settings for dynamic control, compensates for gas density and viscosity effects, and ensures smooth, overshoot-free transitions between flow rates with excellent steady state stability.

Brooks MultiFlo technology offers unparalleled flexibility; a single device can be configured for thousands of different gas and flow range configurations.

Re-programming is simple and fast; a new gas and range can be programmed in under 60 seconds. Brooks provides an enormous gas database to ensure the maximal value of MultiFlo is realized:

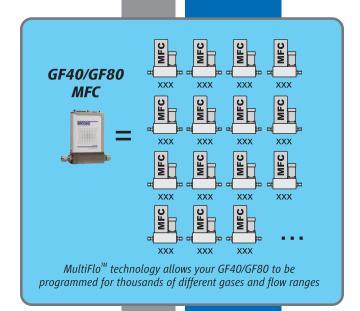

- · Dramatically reduces inventory or spares expense
- The MFC full scale flow range can be scaled down typically by a factor of 3:1 with no impact on accuracy, turndown or leak-by specifications for tremendous process flexibility
- · Native gas calibration is not required
- · Maximum flexibility for research applications

MultiFlo™ Configurator Accessories

MultiFlo kits are available in two configurations:

778Z010ZZZ	Basic MultiFlo Configurator Kit MultiFlo configurator software
A331710003	Cable Assembly 2.5mm
A332300001	Converter RS-232/485
778Z011ZZZ	MultiFlo Config Kit with Power Supply
	and Adapter Cables
	MultiFlo configurator software
A331710003	Cable Assembly 2.5mm
A332300001	Converter RS-232/485
A332295001	MFC/MFM Power Supply
A332297002	9 Pin Power Cable
A332297001	DNet Power Cable

^{*}MultiFlo configurator software is available on the Brooks Instrument website at: www.BrooksInstrument.com/MultiFlo

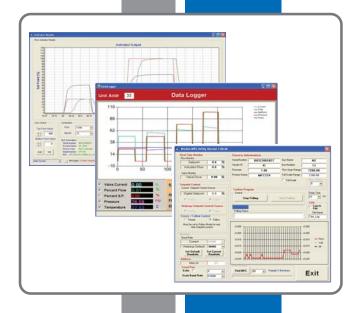

# of Platforms	GF040/GF080 Range	Competitor A 2 Models Range	Competitor B 4 Models Range
1	3 - 10	10	1 - 5
2	11 - 30	17.5	6 - 14

14		22,000	30,0001 - 50,000
15		30,000	
16		50,000	

The Brooks Advantage! Fewer platforms means more process flexibility and lower cost of spares.

Product Description

Enhanced Diagnostics

The mass flow controller remains one of the most complex and critical component in gas delivery systems; removing the mass flow controller to determine if it is faulty should be the last resort. In response to this fact, Brooks pioneered smarter mass flow controllers with embedded self test routines and introduced an independent diagnostic/service port to provide the user with access to diagnostic data for troubleshooting without interrupting flow controller operation.

Advanced Thermal Flow Measurement Sensor

Brooks' proprietary sensor technology combines:

- Improved signal to noise performance for improved accuracy at low setpoints
- Improved reproducibility at elevated temperatures through new isothermal packaging, onboard conditioning electronics with ambient temperature sensing and compensation
- Improved long-term stability through an enhanced sensor manufacturing process
- Highly corrosion resistant Hastelloy C-22 sensor tube
- Optimized temperature profile for gases prone to thermal decomposition

GF Reliability - Zero Drift - 40°C 0.60 0.40 0.20 0.20 0.40 0.40 0.00 0K 50K 100K 250K 500K 750K 1M Number of Cycles GF-1 Upper Limit (+0.5% F.S.) Lower Limit (-0.5% F.S.)

Manifold/Gas Stick Solutions

Many users are looking to reduce the foot print of the gas delivery system by employing standard or customer downport configurations. Brooks will work with you on a proprietary stick, manifold or panel design using downport components as appropriate to satisfy the requirements of the application.

Product Applications

Solar Cells / CVD

Developed to meet the diverse process requirements for solar cells, fiber optics, and the glass and metal coatings markets, the GF40/GF80 mass flow controllers offer a single platform solution for diffusion furnace, thin film deposition, and other difficult applications.

With the GF40 offering elastomer seals and GF80 offering metal seals, this single platform can cover complex gas distribution systems. The MutliFlo feature can minimize costly inventory while providing industry leading actual gas accuracy.

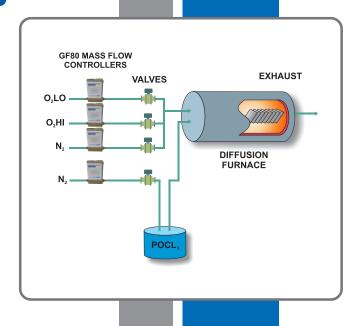

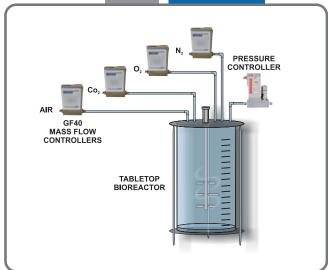

Table Top Bioreactors

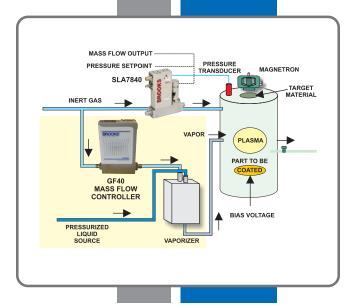

Brooks has earned the leading reputation in controlling gas flows for bioreactor applications. The GF40 mass flow controllers are perfect for controlling dissolved oxygen and pH. The MultiFlo capability can greatly simplify spares inventory and the ordering process. With multiple digital protocol communication options and other advanced features, the GF40 is an ideal device for the bioreactor process.

Vacuum Processes

Brooks offers many products that deliver exceptional performance for vacuum processes. The GF40/GF80 mass flow controllers are no exception. With elastomer and metal seal options, several digital communication protocols offerings, and the MultiFlo capability, the GF40/GF80 can serve a wide variety vacuum processes.

With Brooks' other products like the XacTorr® capacitance manometer and SLA7800 Series pressure controllers, the GF40/ GF80 makes Brooks a one-stop-shop for instrumentation in vacuum processes.

Product Specifications

Performance	GF40	GF80				
Full Scale Flow Range	3 sccm to 50 slm					
Flow Accuracy	<u>+</u> 1% S.P. 35-100%, <u>+</u> 0.35% F.S. 2-35%					
Repeatability & Reproducibility	< <u>±</u> 0.2% S.P.					
Linearity	<u>±</u> 0.5% F.S. (incl	uded in accuracy)				
Response Time (Settling Time)	Normally Closed Valve < 1 sec. (within Normally Open Valve < 3 sec (within	1 3				
Control Range	2-100%

Brooks Service and Support

Brooks is committed to assuring all of our customers receive the ideal flow solution for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards.

Visit www.BrooksInstrument.com to locate the service location nearest to you.

START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

CUSTOMER SEMINARS AND TRAINING

Brooks Instrument can provide customer seminars and dedicated training to engineers, end users, and maintenance persons. *Please contact your nearest sales representative for more details.*
